FOR THE AQUATIC PHYSIOTHERAPY PATIENT

A light weight Turtle visor on the swimmer will trigger an alarm when frantic splashing or head immersion occurs, notifying attendant(s) that assistance is urgently required. Provide additional protection for adults with special needs and senior citizens doing aquatic physiotherapy at home or at the clinic.

Safety Turtle wireless alert button(s) allow for manual activation of the Base Station, from the pool and/or other activity location(s).

“Safety Turtle addresses a real concern that I have had with my patients who participate in aquatic therapy. I have been particularly impressed with how patients have adopted the practice of using the Safety Turtle alarm. While the safety profile of our patients has been greatly improved with the installation of the Safety Turtle alarm, our patients hardly notice the alarm components and the alarm in no way affects their therapy experience.”
